0500/401

NATIONAL QUALIFICATIONS 2010
FRIDAY, 30 APRIL 9.00 AM – 10.30 AM
CHEMISTRY STANDARD GRADE
General Level

Fill in these boxes and read what is printed below.

Full name of centre
Town

Forename
Surname

Date of birth
Day Month Year

Scottish candidate number
Number of seat

1 All questions should be attempted.

2 Necessary data will be found in the Data Booklet provided for Chemistry at Standard Grade and Intermediate 2.

3 The questions may be answered in any order but all answers are to be written in this answer book, and must be written clearly and legibly in ink.

4 Rough work, if any should be necessary, as well as the fair copy, is to be written in this book.
   Rough work should be scored through when the fair copy has been written.

5 Additional space for answers and rough work will be found at the end of the book.

6 The size of the space provided for an answer should not be taken as an indication of how much to write. It is not necessary to use all the space.

7 Before leaving the examination room you must give this book to the Invigilator. If you do
PART 1

In Questions 1 to 9 of this part of the paper, an answer is given by circling the appropriate letter (or letters) in the answer grid provided.

In some questions, two letters are required for full marks.

If more than the correct number of answers is given, marks will be deducted.

A total of 20 marks is available in this part of the paper.

SAMPLE QUESTION

(a) Identify the hydrocarbon.

CH$_4$  CO  C$_2$H$_5$OH  CO$_2$

The one correct answer to part (a) is A. This should be circled.

(b) Identify the two elements.

As indicated in this question, there are two correct answers to part (b). These are B and F. Both answers are circled.

If, after you have recorded your answer, you decide that you have made an error and wish to make a change, you should cancel the original answer and circle the answer you now consider to be correct. Thus, in part (a), if you want to change an answer A to an answer D, your answer sheet would look like this:

If you want to change back to an answer which has already been scored out, you should enter a tick (✓) in the box of the answer of your choice, thus:
1. The grid contains the symbols for some elements.

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pt</td>
<td>Na</td>
<td>P</td>
<td></td>
</tr>
<tr>
<td>D</td>
<td>E</td>
<td>Ne</td>
<td></td>
</tr>
</tbody>
</table>

(a) Identify the symbol for sodium.
You may wish to use page 8 of the data booklet to help you.

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>E</td>
<td>F</td>
<td></td>
</tr>
</tbody>
</table>

1

(b) Identify the element which was the first to be discovered.
You may wish to use page 8 of the data booklet to help you.

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>E</td>
<td>F</td>
<td></td>
</tr>
</tbody>
</table>

1

(c) Identify the symbol for a noble gas.
You may wish to use page 8 of the data booklet to help you.

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>E</td>
<td>F</td>
<td></td>
</tr>
</tbody>
</table>

1

(Turn over)
2. The grid contains the names of some reagents used in chemical tests.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>bromine solution</td>
<td>ferroxy1 indicator</td>
</tr>
<tr>
<td>D</td>
<td>lime water</td>
<td>Benedict’s solution</td>
</tr>
<tr>
<td>E</td>
<td></td>
<td>iodine solution</td>
</tr>
</tbody>
</table>

(a) Identify the reagent used to test the pH of a dilute acid.

(b) Identify the reagent used to test for glucose.
3. A teacher set up some experiments to investigate the dyeing of cloth.

(a) Identify the two experiments carried out under neutral conditions.

(b) Identify the two experiments which should be compared to show the effect of pH on the dyeing of cloth.
4. The grid shows the names of some oxides.

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>potassium oxide</td>
<td>nitrogen dioxide</td>
<td>carbon monoxide</td>
</tr>
<tr>
<td>D</td>
<td>carbon dioxide</td>
<td>E</td>
<td>F</td>
</tr>
<tr>
<td></td>
<td>hydrogen oxide</td>
<td>sulphur dioxide</td>
<td></td>
</tr>
</tbody>
</table>

(a) Identify the oxide produced by the sparking of air.

(b) Identify the oxide which dissolves in water to produce an alkaline solution.
5. The grid shows the formulae for some compounds.

A  
CuCl₂

B  
Na₂O

C  
LiF

D  
SO₂

E  
BaF₂

F  
SiCl₄

(a) Identify the two compounds which exist as molecules.

(b) Identify the compound which gives a red flame colour.
   You may wish to use page 4 of the data booklet to help you.
6. The grid shows the names of different types of chemical reaction.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>neutralisation</td>
<td>photosynthesis</td>
<td>addition</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>D</th>
<th>E</th>
<th>F</th>
</tr>
</thead>
<tbody>
<tr>
<td>polymerisation</td>
<td>corrosion</td>
<td>combustion</td>
</tr>
</tbody>
</table>

(a) Identify the reaction in which chlorophyll absorbs light energy.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>E</td>
<td>F</td>
</tr>
</tbody>
</table>

(b) Identify the reaction which takes place when iron rusts.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>E</td>
<td>F</td>
</tr>
</tbody>
</table>

(c) Identify the reaction represented by the equation:

\[
\text{H}_2 \text{C} = \text{C} - \text{H} + \text{Br}_2 \rightarrow \text{H} - \text{C} - \text{C} - \text{H} - \text{Br} - \text{H}
\]

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>E</td>
<td>F</td>
</tr>
</tbody>
</table>

[0500/401] Page eight
7. The table gives information about some substances.

<table>
<thead>
<tr>
<th>Substance</th>
<th>Conducts as</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a solid</td>
<td>a liquid</td>
</tr>
<tr>
<td>A</td>
<td>yes</td>
<td>yes</td>
</tr>
<tr>
<td>B</td>
<td>no</td>
<td>yes</td>
</tr>
<tr>
<td>C</td>
<td>no</td>
<td>no</td>
</tr>
<tr>
<td>D</td>
<td>no</td>
<td>yes</td>
</tr>
<tr>
<td>E</td>
<td>no</td>
<td>no</td>
</tr>
</tbody>
</table>

(a) Identify the metal.

A
B
C
D
E

(b) Identify the two covalent substances.

A
B
C
D
E

<td>Hydrogen gas is produced.</td>
</tr>
<tr>
<td>D</td>
<td>Carbon dioxide gas is produced.</td>
</tr>
<tr>
<td>E</td>
<td>Potassium chloride is produced.</td>
</tr>
</tbody>
</table>

(A) Water is produced.  
(B) The pH of the acid decreases.  
(C) Hydrogen gas is produced.  
(D) Carbon dioxide gas is produced.  
(E) Potassium chloride is produced.

**Marks**

(2)
9. Identify the **two** correct statements which refer to an atom of sodium. You may wish to use page 1 of the data booklet to help you.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>

[Turn over]
PART 2

A total of 40 marks is available in this part of the paper.

10. Oil and natural gas are fossil fuels.

(a) Circle the correct words to complete the sentence.

Oil was formed over \{thousands\} of years from the remains of dead animals and plants which decayed under the \{sea bed\}.

(b) When burned, some fossil fuels produce a poisonous gas. This gas reacts with water in the atmosphere to produce acid rain. Name the poisonous gas.

[Turn over]
11. Plants make glucose and oxygen gas during photosynthesis.

(a) (i) State the test for oxygen gas.

(ii) On the diagram below, write the names for substances X and Y.

(b) A student set up an experiment to investigate the rate of photosynthesis in different plants.

The rate of photosynthesis was measured by counting the number of bubbles of oxygen gas produced in 3 minutes.
11. (b) (continued)

The results of the investigation are shown in the table.

<table>
<thead>
<tr>
<th>Name of plant</th>
<th>Number of bubbles of oxygen gas produced in 3 minutes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elodea</td>
<td>19</td>
</tr>
<tr>
<td>Cabomba</td>
<td>32</td>
</tr>
<tr>
<td>Hornwort</td>
<td>12</td>
</tr>
<tr>
<td>Parrots Feather</td>
<td>24</td>
</tr>
<tr>
<td>Duckweed</td>
<td>8</td>
</tr>
</tbody>
</table>

(i) Draw a bar graph to show the information in the table. 
*Use appropriate scales to fill most of the graph paper.*

(Additional graph paper, if required, can be found on page 25.)

(ii) Suggest **one** factor that needs to be kept the same to make this investigation fair.
12. Butane is a hydrocarbon which can be used as a fuel.

(a) When butane burns in oxygen, carbon dioxide and water are produced. Write an equation, using symbols and formulae, for the burning of butane, C₄H₁₀. There is no need to balance the equation.

(b) The aluminium pot is strong, light and does not melt when heated.

(i) Give another property of the aluminium which makes it suitable for this use.

(ii) The handle of the cooking pot is made from a plastic which does not melt when heated. What term is used to describe this type of plastic?

(c) After some time the bottom of the pot becomes covered in a black substance.

Suggest what the black substance could be.
13. Potassium carbonate is a compound made up of different elements.

(a) Name the elements present in potassium carbonate.

(b) When potassium carbonate solution and copper nitrate solution are mixed, a chemical reaction takes place.

(i) Name this type of chemical reaction.

(ii) Name the solution formed in this reaction.

You may wish to use page 5 of the data booklet to help you.

(iii) How could the solid be separated from the solution?

[Turn over]
14. Iron can be mixed with other elements to produce steel for different uses.

Chromium is added to make steel suitable for use in cooking pots. Railway tracks are made from steel which contains manganese. Titanium is added to make steel suitable for aircraft parts while adding tungsten produces steel used to make hammers.

(a) Present the above information in a table with suitable headings.
14. (continued)

(b) Steel can also be used to make storage tanks for diesel.

One method of protecting the tanks from rusting is to connect magnesium metal to them.

(i) Name two substances which must be present for steel to rust.

(ii) Name the type of protection provided by the magnesium.

(c) Suggest another method of preventing steel from rusting.

1

1 (5)

[Turn over]
15. A hydrogen molecule is made up of two hydrogen atoms joined together.

(a) What **term** is used to describe a molecule made up of **two** atoms?

______________________________

(b) Hydrogen can be obtained by passing electricity through dilute acid. What name is used to describe this process?

______________________________

(c) Hydrogen can be used in fuel cells to supply electricity to run a car.

(i) Suggest **one** advantage of using fuel cells rather than petrol to power cars.

______________________________

______________________________

______________________________

1

(ii) Suggest a possible source of oxygen for use in the fuel cell.

______________________________

1

(iii) Platinum is used as the catalyst in the fuel cell. What is the purpose of a catalyst?

______________________________

1

(5)
16. Fertilisers are added to soil to provide essential elements required for healthy plant growth.

(a) Nitrogen is an essential element. Name one other essential element required for healthy plant growth.

(b) Some compounds containing essential elements are unsuitable for use as fertilisers. Suggest a reason for this.

(c) Certain plants contain bacteria which can convert nitrogen from the air into nitrogen compounds. Which part of the plant contains these bacteria?
17. Octane is a hydrocarbon.

(a) To which family of hydrocarbons does octane belong?

(b) The diagram shows the apparatus used to crack octane.
Octane is cracked using an aluminium oxide catalyst. Bromine solution is used to show that some of the products are unsaturated.

(i) Label the diagram of the apparatus used to crack octane.
(An additional diagram, if required, may be found on page 25.)

(ii) One of the reactions taking place is:

\[ \text{C}_8\text{H}_{18} \rightarrow \text{C}_3\text{H}_6 + \text{X} \]

Identify \( \text{X} \).

(iii) The product, \( \text{C}_3\text{H}_6 \) can be used to make a polymer.
Name the polymer formed when many \( \text{C}_3\text{H}_6 \) molecules join together.
18. Ionic compounds such as potassium chloride can dissolve in water to form a solution.

(a) What term can be used to describe the water?
______________________________

(b) The graph shows how the temperature of the water affects the solubility of potassium chloride.

(i) How does the temperature of the water affect the solubility of the potassium chloride?
______________________________

______________________________

______________________________

1

(ii) Predict the solubility of potassium chloride at 80°C.
_____________________ grams per 100 cm³ of water.

1

(3)
19. A student set up the cell shown.

(a) **On the wires**, indicate the direction of electron flow.

(b) Why do ionic compounds, like copper sulphate, conduct electricity when in solution?

(c) Name a metal which could be used to replace the iron to produce a smaller voltage.

You may wish to use page 7 of the data booklet to help you.

(d) What is the purpose of the ion bridge?
